Education

Indian Institute of Information Technology, Design and Manufacturing, Kurnool Andhra Pradesh, India
B.Tech in Mechanical Engineering Aug. 2024 – Aug. 2028
Relevant Coursework: Data Structures & Algorithms, Object Oriented Programming, Operating Systems, DBMS, Computer Networks, System Design, Linear Algebra, Probability & Statistics, Discrete Mathematics

Projects

DatalakeFaceAuth 2024 Mobile AI Face Authentication GitHub APK

- Built an offline face authentication system using face detection, alignment, anti-spoofing, and face recognition.
- Reduced the AI pipeline to 6.71 MB using INT8 quantization while achieving 173–190 ms recognition and liveness detection.
- Built secure data synchronization using AES-256 encryption, AWS Lambda, and DynamoDB.

CareerOS Autonomous MultiAgent Career Optimization Engine GitHub Demo

- Built an automated job search system using Python, FastAPI, Playwright, and JobSpy to collect jobs from multiple platforms and generate daily job digests.
- Developed a multi-agent system using Gemini, Llama, and CascadeFlow to tailor resumes to job descriptions and check ATS compatibility.
- Built a LaTeX compiler agent that detects compilation errors and automatically fixes resume formatting before generating the final PDF.

askd AI Powered Exam Answer Script Evaluation Platform Live

- Built an AI pipeline to evaluate handwritten exam answers using OCR, rubric-based checking, and automated scoring.
- Used the question paper as context to improve handwriting recognition and generate structured text, equations, tables, and diagrams.
- Scaled the platform to 20 paying institutional customers while handling product development and client requirements.

FinAccess 2024 Explainable Credit Risk Engine GitHub

- Built a FastAPI-based credit risk system using XGBoost and SHAP, supporting 100 concurrent users with 0% failure rate.
- Combined XGBoost and Graph Convolutional Networks to analyze financial risk, achieving 94.31% accuracy and 0.957 ROC-AUC.
- Added SHAP-based explanations and fairness checks to make model predictions easier to understand.

Intelligent Traffic Analysis System Real Time Traffic Monitoring GitHub Demo

- Built a computer vision system using YOLOv8/YOLOv11 and OpenCV to detect and track cars, buses, trucks, and motorcycles.
- Implemented vehicle tracking and lane congestion analysis using ByteTrack/SORT with real-time vehicle counts and queue density.
- Added red-light and rash-driving detection with a Streamlit dashboard for traffic monitoring and data export.

Technical Skills

- **Languages:** Java, Python, C, C++, JavaScript, SQL
- **Computer Science:** Data Structures & Algorithms (400+ problems), OOP, Operating Systems, DBMS, Computer Networks, System Design
- **Mathematics:** Linear Algebra, Probability & Statistics, Discrete Mathematics
- **Web & Backend:** React, Node.js, FastAPI, REST APIs, PostgreSQL
- **Cloud:** AWS Lambda, DynamoDB, Render, Vercel, Supabase
- **AI & Machine Learning:** Vision Language Models, XGBoost, ANN, CNN, SHAP, Scikit-learn, LangChain, RAG
- **Computer Vision:** YOLOv8, YOLOv11, OpenCV, ByteTrack, SORT

Achievements

- **Smart India Hackathon:** Internal First Place, Team Leader.
- **RizeOS Hackathon:** 3rd Place, Team Leader; cleared all 3 rounds with a score of 71.1 points.
- **Hackathons:** Participated in 15+ hackathons; 3rd Place, Netrik Hackathon, Team Leader.
- **askd:** Secured institutional funding for AI startup MVP.
- **National INTSO Olympiad:** Topper, awarded laptop, featured in press.
- **Startup Idea Pitching:** 1st Place; recognized in press associated with Dr. BVR Mohan Reddy, Chairman, Cyient.
